SUMMARY

Backend Engineer specializing in building scalable, production-grade systems using FastAPI and modern database architectures. Experienced in designing secure RESTful APIs, implementing authentication (JWT/RBAC), and developing robust backend workflows for real-world applications. Proven ability to build end-to-end systems including telemetry pipelines, issue tracking platforms, and secure document workflows. Focused on performance, system design, and clean, maintainable architecture.

TECHNICAL SKILLS

Languages: Python, JavaScript

Backend: FastAPI, Node.js, Express.js

Databases: PostgreSQL, MySQL, MongoDB

Tools: Docker, Git, SQLAlchemy

Concepts: API Design, System Design, Authentication (JWT), RBAC, Scalable Architectures

INTERNSHIP

Data Science Intern

July 2025

- Developed a heart disease prediction model using ML with preprocessing, EDA, and model evaluation
- Generated insights and visualizations using Python and Jupyter Notebook

Backend Developer Intern — Labmentix

Jan 2026 – Present

- Built and optimized APIs using FastAPI
- Implemented JWT-based authentication
- Worked on database design and backend performance

EDUCATION

Bachelor of Technology (B.Tech) (Nov 2022 – Apr 2026)

- Srinivas University, Institute of Engineering & Technology
- CGPA: 8.8

Pre-University (PUC) (Sep 2020 – Apr 2022)

- Sri Adichunchanagiri Independent PU College
- Percentage: 90%

Secondary School Leaving Certificate (SSLC) (May 2019 – Jul 2020)

- Sri Adichunchanagiri Composite English Medium High School
- Percentage: 92%

PROJECTS

AETHER-1 — Digital Twin CubeSat Telemetry System

- Designed a software-defined satellite architecture for real-time telemetry simulation
- Built a synchronized telemetry pipeline for continuous data processing
- Implemented edge AI (Random Forest) for anomaly detection
- Engineered low-bandwidth communication (LoRa simulation + CRC validation)
- Developed a ground control system for live telemetry visualization

Bug Tracker — Scalable Issue Tracking System

- Built a modular FastAPI backend with clean architecture
- Implemented JWT authentication and RBAC
- Designed issue lifecycle workflows with audit logging
- Structured relational database schema for scalability

DocSign — Secure Digital Signing Platform

- Developed a secure backend system for document workflows
- Implemented JWT-based authentication and access control
- Designed tamper-resistant document handling with audit trails
- Ensured data integrity and secure API communication

LANGUAGES

- English
- Kannada
- Hindi

ACHIEVEMENTS

- Secured 1st Place in Major Project Exhibition for AETHER-1 Digital Twin CubeSat System
- Won 1st Place in Inter-College SIH Hackathon, developed a Digital Farmer Platform to improve communication between farmers and consumers

CERTIFICATIONS

- 30 Days of Angular – Build 30 Projects with Angular, Udemy (Jul 2025)
- Data Science Internship – Certificate of Completion, Zephyr Technologies (Jun 2025)
- AWS Academy Graduate – AWS Academy Cloud Foundations, AWS Training & Certification (Jan 2025)
- Google Cloud Community – Certification of Participation, Google Cloud (Sep 2024)
- Introduction to Programming Using Python, Etnotech Solutions (Jul 2023)
